

## HS5.201 Growth and Development

### Class Notes: Lecture 1

#### Growth of What?

- Economic growth- rate of increase of real per capita aggregate income in an economic unit (country, state, district etc.)
- Various measures of aggregate income – gross domestic product (GDP), gross national product (GNP) and many others. Broadly understood as per capita income.
- Basic idea is to aggregate the value of goods and services produced in the economic unit each year.
- Accumulation is an approximate synonym for growth, although the exact understanding differs.
- Look at the following graphs and try to analyse the notion of growth in the context of various socio-economic aspects.

#### GDP per capita

Measured in constant US-\$, which adjusts for inflation.

Our World  
in Data

Source: World Bank and OECD

Note: Figures are given in constant US-\$. This means it is adjusted for inflation to allow for comparison over time, but not for price differences between countries.

## Share of population living in extreme poverty, World, 1820 to 2018

This is calculated based on a 'cost of basic needs'-approach. It represents the share of the population that was unable to meet basic needs (including minimal nutrition and adequately heated shelter) according to prices of locally-available goods and services at the time.

## Number of people living in extreme poverty, 2019

Extreme poverty is defined as living below the International Poverty Line of \$2.15 per day. This data is adjusted for inflation and for differences in the cost of living between countries.

## Adult literacy rate, 2021

The share of adults aged 15 and older who can both read and write.

Our World  
in Data

Source: UNESCO (via World Bank)

OurWorldInData.org/literacy • CC BY

Note: Under the UNESCO metric, someone who is literate can, with understanding, read and write a short, simple statement on their everyday life. However, definitions and criteria of literacy can vary by country. You can find further discussion on 'How is literacy measured?' in our post here: <https://ourworldindata.org/how-is-literacy-measured>. Literacy data collected for North America and Western Europe involves more detailed assessments and is not internationally comparable.

## Weekly hours worked by children (7-14) vs GDP per capita (PPP), 2016

The vertical axis shows average weekly working hours for children ages 7-14 who are involved in an economic activity for at least one hour in the reference week of the corresponding survey (irrespective of school attendance). The horizontal axis shows GDP per capita after adjusting for differences in prices across countries and inflation (constant international dollars).
